Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claims 1-6 objected to because of the following informalities: the term "characterized in that" must be changed to --wherein--, so as to comply with U.S. practices. Appropriate correction is required.
2. Claims 4-6 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim may not depend from another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Nolte (5,924,859), which shows all of the claimed limitations. Nolte shows a method for operating a gas burner, with a sensor supplying an ionization signal being assigned to the gas burner (see paragraph (8)), wherein at various points in time (t1-t5/fig.3), the

ionization signal is detected during full-load operation of the gas burner and during partial-load operation of the gas burner (see paragraph (31)), with first difference being formed between the ionization signal during full-load operation and the ionization signal during partial-load operation, at a second point of time, the ionization signal is detected during full-load operation of the gas burner and during partial-load operation of the gas burner, with second difference being formed between the ionization signal during full-load operation and the ionization signal during partial-load operation, the first difference and the second difference are compared with each other, wherein, dependent thereon, the state of the gas burner or of the sensor assigned to the gas burner is inferred (see paragraphs (32)-(40)).
